

Listing of the Claims In this Application

- 1.-2. (Cancelled)
3. (Currently amended) A biometric passkey device configured to perform one or more transactions with a remote computer system without transmitting any biometric information to ~~that~~ the remote computer system, the passkey device comprising audit log storage and authorization profile storage of permissible functions, transactions, and remote computer system allowance for a user of the biometric passkey, the device being configured to:
- (a) authenticate the identity of a user by comparing the user's unique biometric information with biometric information stored with the passkey device;
 - (b) transmit unique passkey device information to the remote computer system to authenticate the identity of the passkey device; and
 - (c) perform one or more transactions with the remote computer system if the identity of the user is first authenticated by the passkey device and the identity of the passkey device is next authenticated by the remote computer system.
4. (Previously presented) The device of claim 3, wherein the biometric information may be one of a retina scan, DNA recognition, thumb or toe print, or a handwriting sample, the device further comprises a substance detection sensor.
- 5.-11. (Cancelled)
12. (Previously presented) A system for performing secure transactions between a

biometric proxy passkey and a remote computer system without transmitting any biometric information to that remote computer system, the system comprising:

- (a) a biometric proxy passkey configured to (i) authenticate the identity of a user by comparing the user's unique biometric information with biometric information stored with the proxy passkey and (ii) transmit unique proxy passkey information to the remote computer system; and
- (b) a remote computer system configured to (i) authenticate the identity of the proxy passkey by comparing the unique proxy passkey information with device information stored on the remote computer system; and (ii) allow the proxy passkey to perform one or more transactions on the remote computer system if the identity of the user is first authenticated by the proxy passkey and the identity of the proxy passkey is next authenticated by the remote computer system.

13. (Currently amended) The system of claim 11, wherein the passkey device further comprises an authorization profile storage of permissible functions, transactions, and remote computer system allowance for a user of the biometric passkey and an audit log storage.

14.-28. (Cancelled)
